Porcelain VS. Ceramic Tile

When talking tile, homeowners often discuss ceramic and porcelain interchangeably, as if they were one and the same. Tile shop salespeople often claim a vast world of difference between the two in order to justify porcelain's higher prices. Porcelain and ceramic tile are essentially the same, with one slight difference. Both are part of the larger category of tiles we can call *ceramic*. It is more a case of reverse-naming, whereby manufacturers take tiles that have certain qualities and then assign the *ceramic* or *porcelain* titles to them. So what's the difference?

Interior or Exterior: No Ceramic Outside- Laying porcelain or ceramic tile outside is typically not recommended. Ceramic is usually not durable enough for exterior use because it absorbs too much water. If you live in areas which freeze, your tile would likely crack on the first freezing night. Stone is a better option. Even though conventional wisdom has been to keep porcelains/ceramics away from the outside, I'm seeing more that are for exterior use. I would still recommend buying porcelain that is expressly designated for exterior use.

Density: Porcelain Denser Than Ceramic- Porcelain clays are denser and thus less porous than ceramic clays. This makes porcelain tile harder and more impervious to moisture than ceramic tile.

Durability: Porcelain Wins-Not only is porcelain tile denser than ceramic tile, but due to its through-body composition it is considered more durable and better suited for heavy usage than ceramic tile. Chip the ceramic tile and you find a different color underneath the top glaze. Chip the porcelain and the color keeps on going--the chip is nearly invisible. While both porcelain and ceramic are fired, porcelain is fired at higher temperatures for a longer time than ceramic. Also, porcelain has higher feldspar content, which makes it more durable.

Ease of Cutting: Ceramic a Softer Cut Than Porcelain. The aforementioned density has a good side and a bad side. While ceramic is less dense than porcelain, it's also a far easier material for DIY homeowners to cut--by hand, by wet tile saw, or snap tile cutter. Porcelain is more brittle and may require the experienced hand of a tile-setter to cut properly.

Cost: Ceramic Is Cheaper :All other factors as equal as possible, ceramic tile is cheaper than porcelain tile. Unless there is some anomaly in pricing, ceramic tile will *always* be cheaper than porcelain tile. But again, you need to consider other factors in your choice of tile, not solely pricing.

PEI Rating: Porcelain Higher Than Ceramic- PEI ratings for porcelain tile tend to be around 5 (heavy residential and commercial traffic). PEI ratings for ceramic tile can range anywhere from PEI 0 (no foot traffic) up to PEI 5, but with most ratings in the lower end of the scale.
